The goal of this report is to offer a meaningful understanding of the most significant health needs across Creek County, as well as to inform planning efforts to address those needs. Special attention has been given to the needs of individuals and communities who are more vulnerable, unmet health needs or gaps in services, and input gathered from the community. Findings from this report can be used to identify, develop, and focus hospital, health system, and community initiatives and programming to better serve the health and wellness needs of the community.

Executive Statement

The 2021 community health needs assessment (CHNA) represents a true collaborative effort to gain a meaningful understanding of the most pressing health needs across Creek County. Ascension St. John Sapulpa is exceedingly thankful to the many community organizations and individuals who shared their views, knowledge, expertise, and skills with us. In particular, we would like to recognize the authors and consultants of this report:

Authors

Executive Summary

The goal of the 2021 community health needs assessment (CHNA) report is to offer a meaningful understanding of the most significant health needs across Creek County. Findings from this report can be used to identify, develop, and focus hospital, health system, and community initiatives and programming to better serve the health and wellness needs of the community.

Purpose of the CHNA

As part of the Patient Protection and Affordable Care Act of 2010, all not-for-profit hospitals are required to conduct a CHNA and adopt an implementation strategy every three years. The purpose of the CHNA is to understand the health needs and priorities of those who live and/or work in the communities served by the hospital, with the goal of addressing those needs through the development of an implementation strategy plan.

Community Served

Although Ascension St. John Sapulpa serves eastern Oklahoma and southeastern Kansas, we have defined its community served as Creek County for the 2021 CHNA. Creek County was selected as the community served because it is our primary service area as well as our partners' primary service area. Additionally, community health data is readily available at the county level.

Data Analysis Methodology

The 2021 CHNA was conducted from September 2021 to February 2022 and followed the assessment model developed by the County Health Rankings & Roadmaps and Robert Wood Johnson Foundation, utilizing a social determinants of health framework for community health improvement. As an evidence-based practice, we gathered both community input and secondary data. Community input sources included residents, health care professionals, public health experts, multi-sector representatives, and other stakeholders. Special attention was given to the needs of individuals and populations who are more vulnerable, and to unmet health needs or gaps in services.

For Creek County, five community focus groups (13 total participants) and 22 interviews with vulnerable population groups, key stakeholders, and civic leaders (26 total participants) were conducted to obtain community input from across the community. Many participants represented populations considered vulnerable — disadvantaged, marginalized, or other people who have historically been disenfranchised from the health care system. Secondary data was compiled and reviewed to understand the health status of the community. Measures reviewed included chronic disease, social and economic factors, and health care access and utilization trends in the community, and were gathered from reputable and reliable sources.
Community Needs

Ascension St. John Sapulpa, with contracted assistance from Seven Rivers Consulting LLC, analyzed secondary data of a broad number of indicators and gathered community input through interviews with community residents, vulnerable population groups, key stakeholders, and civic leaders to identify the needs in Creek County. In collaboration with community partners, Ascension St. John Sapulpa used a phased prioritization approach to determine the most crucial needs to be addressed. The most significant needs* we devised from our research are as follows, in order of importance:

1. Mental and behavioral health
2. Access to care: barriers to primary care
3. Diet and exercise: access to healthy food
4. Alcohol and drug use: access to treatment and recovery services
5. COVID-19
6. Housing and transit: reliable transportation
7. Education: health literacy

Following the completion of the assessment, the significant needs selected as priority needs for the 2021 CHNA implementation strategy were mental and behavioral health, access to care, and diet and exercise, with focus on any specific measures that rose to the top in significance. For access to care, that includes barriers to primary care, and for diet and exercise, that includes access to healthy food.

*Ascension's need terminology is based on the County Health Rankings Model. However, if applicable, a measure within that need is noted after the colon to further specify or clarify the need.
About Ascension

As one of the leading non-profit and Catholic health systems in the United States, Ascension is committed to delivering compassionate, personalized care to all, with special attention to persons living in poverty and those most vulnerable.

Ascension

Ascension is a faith-based health care organization dedicated to transformation through innovation across the continuum of care. The national health system operates more than 2,600 sites of care – including 146 hospitals and more than 40 senior living facilities – in 19 states and the District of Columbia, while providing a variety of services including clinical and network services, venture capital investing, investment management, biomedical engineering, facilities management, risk management, and contracting through Ascension's own group purchasing organization.

Ascension's Mission provides a strong framework and guidance for the work done to meet the needs of communities across the U.S. It is foundational to transform health care and express priorities when providing care and services, particularly to those most in need.

**Mission:** Rooted in the loving ministry of Jesus as healer, we commit ourselves to serving all persons with special attention to those who are poor and vulnerable. Our Catholic health ministry is dedicated to spiritually centered, holistic care which sustains and improves the health of individuals and communities. We are advocates for a compassionate and just society through our actions and our words.

For more information about Ascension, visit [https://www.ascension.org](https://www.ascension.org).

Ascension St. John

Serving eastern Oklahoma and southeastern Kansas, Ascension St. John operates and manages six hospitals with 940 total licensed beds, as well as around 100 health care clinics and facilities. More than 5,000 associates are directly employed by the health system, including 324 providers.* Across the region, Ascension St. John provided more than $119 million in community benefit and care for persons living in poverty in fiscal year 2021. It has served Oklahoma since its establishment in 1926.

*Note: The total number of associates provided for the health system only includes associates who are directly employed by Ascension St. John. This number includes Ascension Medical Group and Regional Medical Laboratory, but does not include Ascension Technologies, TouchPoint Support Services, Medxcel, TRIMEDX, R1, or associates employed within a ministry-wide function of Ascension.
Ascension St. John Sapulpa

As a Ministry of the Catholic Church, Ascension St. John Sapulpa is a non-profit hospital governed by a local board of trustees represented by community members, medical staff, and sister sponsors, and has been providing medical care to Creek County for more than 25 years.

Ascension St. John Sapulpa is a two-story, 25-bed facility located in the city of Sapulpa, Okla. The facility joined the health system in 1997 with the acquisition of Bartlett Memorial Hospital and was renamed in 2000. Designated as a critical access hospital, Ascension St. John Sapulpa offers Creek County residents much-needed quality medical care, including a fully equipped, 24/7 emergency center and the capability to accept acute care patients. Services include primary care, heart and vascular health, wound care, general surgery, rehabilitation, lab services, and imaging. In addition, the hospital has “swing beds” for easy transition from acute care to skilled care. Swing beds can also be utilized for rehabilitation therapy to help patients transition home or to a long-term care facility and to help rehabilitate patients from an illness, accident or surgery. Ascension St. John Sapulpa serves the behavioral health needs of those 65 and older through a group counseling service known as Senior Life Solutions.

Since 1997, Ascension St. John Sapulpa has continued the long and valued tradition of addressing the health needs of people in our community, following in the footsteps of our legacy sponsor, the Sisters of the Sorrowful Mother. For more information about Ascension St. John Sapulpa, visit https://healthcare.ascension.org/locations/oklahoma/oktul/sapulpa-ascension-st-john-sapulpa.
About the Community Health Needs Assessment

A community health needs assessment, or CHNA, is essential for community building and health improvement efforts, and directing resources where they are most needed. CHNAs can be powerful tools that have the potential to be catalysts for immense community change.

Purpose of the CHNA

A CHNA is "a systematic process involving the community to identify and analyze community health needs and assets in order to prioritize, plan, and act upon unmet community health needs."¹ The process serves as a foundation for promoting the health and well-being of the community by identifying the most pressing needs, leveraging existing assets and resources, developing strategic plans, and mobilizing hospital programs and community partners to work together. This community-driven approach aligns with Ascension St. John Sapulpa’s commitment to offer programs designed to address the health needs of a community, with special attention to persons who are underserved and vulnerable.

IRS 501(r)(3) and Form 990, Schedule H Compliance

The CHNA also serves to satisfy certain requirements of tax reporting, pursuant to provisions of the Patient Protection and Affordable Care Act of 2010, more commonly known as the Affordable Care Act (ACA). As part of the ACA, all not-for-profit hospitals are required to conduct a CHNA and adopt an implementation strategy every three years. Requirements for 501(c)(3) hospitals under the ACA are described in Code Section 501(r)(3) and include making the CHNA reports (current and previous) widely available to the public. In accordance with this requirement, electronic reports of both the CHNA and implementation strategy can be found at https://healthcare.ascension.org/CHNA, and paper versions can be requested from the Ascension St. John Sapulpa Administration office by calling 918-227-8601 or from the health system’s Mission Integration office by calling 918-744-2504.

¹ Catholic Health Association of the United States (https://www.chausa.org)
Community Served and Demographics

A first step in the assessment process is clarifying the geography within which the assessment occurs and understanding the community demographics.

Community Served

For the purpose of the 2021 community health needs assessment (CHNA), Ascension St. John Sapulpa has defined its community served as Creek County. Although Ascension St. John Sapulpa serves eastern Oklahoma and southeastern Kansas, the "community served" was defined as such because (a) most of our service area is in each county; (b) most of our assessment partners define their service area at the county level; and (c) most community health data is available at the county level.

Map of Community Served

Creek County is located in northeastern Oklahoma and is part of the Tulsa-Broken Arrow-Owasso Metropolitan Statistical Area. The county seat and the largest city in Creek County is Sapulpa. Other
significant towns include Bristow, Mannford, and Drumright. According to the U.S. Census, Creek County grew by 2.6 percent from 2010 to 2020. The largest industries in the county include manufacturing, health care, social assistance, and retail trade. Some of Creek County's top employers include the City of Sapulpa, the Muscogee Creek Nation, the Ardagh Group, and John Christner Trucking.*

*Sources: DataUSA, Sapulpaok.gov

Demographic Data

Located in northeastern Oklahoma, Creek County has a population of 71,522 and is the 10th most populous county (out of 77) in the state. Below are demographic data highlights for Creek County:

- 18.2 percent of the residents of Creek County are 65 or older, compared with 16.1 percent in Oklahoma.
- 95.4 percent of residents are non-Hispanic; 4.6 percent are Hispanic or Latinx (any race).
- 75.4 percent of residents are white; 0.7 percent are Asian; and 2.2 percent are Black or African American.
- The total population increase from 2010 to 2020 was 2.6 percent. The percentage of people identifying as Hispanic or Latinx in Creek County in 2020 is unchanged from 2010.
- The median household income is slightly above the state median income ($54,737 for Creek County; $54,447 for Oklahoma).
- The percent of all ages of people in poverty was significantly lower than the state (12.9 percent for Creek County; 14.3 percent for Oklahoma).
- The <65 years uninsured rate for Creek County is lower than the state (15.6 percent for Creek County; 16.6 percent for Oklahoma).

To view community demographic data in its entirety, see [Appendix B](#).
Process and Methods Used

Ascension St. John Sapulpa is committed to using national best practices in conducting the community health needs assessment (CHNA). Health needs and assets for Creek County were determined by gathering and analyzing a combination of secondary data and community input.

Ascension St. John Sapulpa’s approach followed the model developed by County Health Rankings & Roadmaps and the Robert Wood Johnson Foundation, utilizing a social determinants of health framework for community health improvement. The model emphasizes the various factors that influence how long and how well the residents of a community live. According to County Health Rankings & Roadmaps, the set of secondary data measures helps communities understand how healthy their residents are today (health outcomes) and what will impact their health in the future (health factors).

Collaborators and/or Consultants

Ascension St. John Sapulpa completed its 2021 CHNA with the contracted assistance of Seven Rivers Consulting LLC. Seven Rivers Consulting is a small, grassroots firm with deep relationships across northeastern Oklahoma's health care and social welfare sectors. To date, Seven Rivers Consulting has completed several community-based participatory research projects by working with key agencies, leaders, and citizens throughout the region. Every Seven Rivers Consulting associate is trained in health care delivery sciences, and all have past and/or present affiliation with the University of Tulsa.
Data Collection Methodology

Community Input

In collaboration with various community partners, Ascension St. John Sapulpa collected and analyzed community input for Creek County. Seven Rivers Consulting conducted community-based interviews with:

- Community members
- Vulnerable population groups, with a combination of organization/agency leaders and patients/clients in each session
- Community organization/agency key stakeholders
- Civic leaders

Notes from every encounter were transcribed. The raw qualitative text was analyzed, sorted by themes, and placed into one of eight domains:

- Health needs
- Economic and social concerns
- Barriers to positive health outcomes
- Services lacking for certain populations
- Ways health systems can improve community health and wellness
- Suggestions to close gaps or reduce barriers
- Effects of the COVID-19 pandemic on certain populations
- Hope for the future

In each of the eight domains, several key themes emerged, leading to the results reported herein. But, qualitative data is often nuanced, meaning that many participant responses fit poorly into predefined categories. Therefore, we further clarified our findings in this report’s appendices, with direct quotes from several of the people who were interviewed.

In addition to summarizing barriers and challenges in their community, research participants also indicated ways health care providers could best support their needs and speculated about hopes for the future.

Secondary data

Secondary data were collected primarily from the County Health Rankings & Roadmaps public website (https://www.countyhealthrankings.org) and analyzed. In addition, this report intentionally explores the effects of the COVID-19 pandemic on physical, mental, emotional, and social health, as well as health equity.
Summary of Community Input

Recognizing its vital importance in understanding the health needs and assets of the community, Seven Rivers Consulting consulted with a range of public health and social service providers that represent the broad interests of Creek County. A concerted effort was made to ensure that the individuals and organizations represented the needs and perspectives of: 1) public health practice and research; 2) individuals who are medically underserved, low-income, or considered among the minority populations served by the hospital; and 3) the broader community at large and those who represent the broad interests and needs of the community served.

Multiple methods were used to gather community input, including interviews with community residents, vulnerable population groups, key stakeholders, and civic leaders. These methods provided additional perspectives on how to select and address top health issues facing Creek County. A summary of the process and results is outlined below.

Community Focus Groups

A series of five focus groups were conducted by Seven Rivers Consulting to gather feedback from community members on the health needs and assets of Creek County. Because of the pandemic (particularly the Omicron spike in early 2022), focus groups were conducted entirely online, using Zoom video conferencing. This group of participants was defined as general community members of various demographics residing in Creek County. Thirteen individuals participated in the focus groups, held in January and February 2022. While the focus groups do not portray an exact representation of the region’s diverse population, we estimate they represent the collective spirit of assets, needs, concerns, and fears among those living in Creek County. All interviewees received an incentive for their participation: a $20 gift card to a local gas station chain.

<table>
<thead>
<tr>
<th>Community Focus Groups</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Key Summary Points</strong></td>
</tr>
</tbody>
</table>

Key themes that derived from focus group discussions included a lack of affordable, healthy food. Fast-food outlets are plentiful throughout Creek County, but nutritious food can be expensive and difficult to access. The cost of care remains a key barrier to accessing medical services within Creek County. Some residents admitted they actively avoid seeking clinical care due to high costs and a perceived lack of value. Many said they do not know how to access basic clinical services across the county. Residents identified drug abuse as a major threat to wellness, citing a lack of mental health and rehabilitation facilities available in the county. The focus groups revealed that stigma around poor mental health and drug abuse has improved in recent years, perhaps because participants experienced acute mental health struggles themselves during the pandemic. Despite this, older populations and racial/ethnic minority groups are still likely to stigmatize those requiring mental health and drug abuse services. Digging deeper, many admitted to lacking knowledge about how to access health and social resources. Compounding this is a feeling of not being heard by their clinicians when health issues arise.
### Populations Represented
- Blacks/African Americans, Asian Americans and Hispanics
- Residents of Creek County
- Older individuals
- Individuals living in poverty
- Medically underserved individuals
- Individuals living with chronic health conditions

### Common Themes
In order of ranked importance:
- Access to healthy food
- Mental and behavioral health
- Access to alcohol/drug treatment and recovery services
- Health literacy
- COVID-19

### Meaningful Quotes
- “What I love about Creek County is the generous spirit of the residents' collaboration — working together, really caring about what is going on in our community.”
- “We have some great programs in terms of access for health care to children. But there is a lack of knowledge around how to access this care.”
- “We honestly don’t have enough mental health facilities. I used to work a 12-hour shift, and there was always a waitlist to get in. So many places have closed because of [lack of] funding.”

### Interviews with Vulnerable Population Groups, Key Stakeholders and Civic Leaders
A series of 22 interviews were conducted by Seven Rivers Consulting to gather feedback from vulnerable population groups, key stakeholders, and civic leaders on the health needs and assets of Creek County. These groups of participants were defined as follows:

- **Vulnerable population groups**: one or more staff members of an organization or agency whose principal mission includes serving marginalized and/or historically discriminated people in Creek County AND one or more clients/patients served by the organization/agency
- **Key stakeholders**: members of an organization or agency operating in and/or serving people from Creek County
- **Civic leaders**: people serving in a civic leadership role (e.g., mayor, city councilor, public health director, etc.)

Some individuals and organizations interviewed represent populations both in and beyond Creek County. Twenty-six representatives from 22 different organizations/agencies participated in the interviews, held between October 2021 and January 2022.
Interviews with Vulnerable Population Groups, Key Stakeholders and Civic Leaders

Key Summary Points

As was the case in other counties in northeastern Oklahoma, the dominant theme that emerged from our research was a widespread lack of mental health and alcohol/drug abuse recovery services. While initial access remains somewhat challenging, many cited that long-term follow-up with therapists and counselors is nearly impossible in Creek County – even for those with health insurance. Others admitted that finding healthy eating options is problematic. Food deserts predominate in rural areas, but fast-food outlets are plentiful throughout the county. Restaurants serving nutritious food options are increasingly limited (a local salad-themed establishment closed last year.) Our interviews revealed that many people lack knowledge and literacy when it comes to accessing community resources, such as food, housing, and utilities benefits. Compounding the problem is that none of these sectors seem to connect with one another – making it overwhelmingly difficult for people and families with multiple economic hardships to navigate the system. Finally, many responded that the COVID-19 pandemic led to increased isolation, stress, and division across the county, putting severe strain on securing health care and social services. Intellectual and social development suffered among children, as schools were forced to pivot to online platforms.

Meaningful Quotes

- “The problem in Creek County is not so much about black market opportunities for buying and selling of drugs; it's really about escaping from reality. When you’re running away from your [medical and mental health] problems, you can always find relief with self-medication. Getting help is not easy. People run in cycles with their drug abuse patterns until they bump into the right person, such as a doctor, pastor, or trusted friend.”
- “Many of the [social resource] services are there, but picking up the phone, scheduling the appointment, bringing the correct paperwork, waiting for the resources can be a nightmare when dealing with one – let alone multiple – agencies. Without proficient English-language skills, I would say the process is impossible.”
- “COVID is arresting the development of not just K-12 students, but also young adults. Time will tell the long-term effects from the pandemic.”

The same questions were posed in the Spanish-speaking focus groups. In those sessions, a number of concerns were revealed that were unique to the Hispanic community. For example, some spoke about other topics related to cultural understanding and language barriers.
clinicians unable or unwilling to provide translators for non-English-speaking patients and lack of informational materials written in Spanish. Immigrants in particular experience unique fears and concerns. Others noted a general lack of cultural awareness by the health care sector. Some participants said sensitive issues, such as sexual and reproductive health and end-of-life decisions, were discussed in direct ways by their providers, which was a cultural shock. Such differences could lead to prolonged mistrust.

To view community input data in its entirety, see Appendix C.

Summary of Secondary Data

Secondary data is information that has already been collected and published by another party. Both governmental and non-governmental agencies routinely collect secondary data reflective of the health status of the population at the state and county levels through surveys and surveillance systems. Secondary data was compiled from various sources that are reputable and reliable.

Health indicators in the following categories were reviewed:

- Health outcomes
- Social and economic factors that impact health
- Health behaviors
- Access to health care
- Health disparities

When comparing secondary data results from the 2018 (fiscal year 2019) CHNA, there are several significant changes to report. Most notably, people in Creek County seem to experience higher median household income, lower unemployment, fewer children living in poverty, and more children living in two-parent homes. These factors likely played a role in the higher rate of life expectancy and lower rate of food insecurity. Unfortunately, numerous physical and mental health indicators have worsened over the past three years. Perhaps in part due to the COVID-19 pandemic, many in the county have reported more physical and mental distress. Excessive alcohol, violent crimes, suicide, tobacco use, and HIV prevalence have all increased since the last CHNA report was published. However, adult obesity, physical inactivity and opioid overdose deaths have improved. Some of these findings mirror observations seen across the entire northeastern Oklahoma region.

A summary of the secondary data collected and analyzed through this assessment is outlined below. To view secondary data and sources in its entirety, see Appendix D.

Summary of COVID-19 Impact on Creek County

The COVID-19 pandemic has had an impact on communities worldwide. In the U.S., urban communities took the hardest hit for both COVID-19 cases and deaths. Profound disparities emerged as the
pandemic grew. Older Americans have the highest risk of death from COVID-19 than any other age group, with 81 percent of deaths from COVID-19 in people over 65 years of age. There are significant disparities by race and ethnicity as well. Americans of color have higher risk of exposure, infection, and death compared with non-Hispanic white Americans.²

Significant COVID-19 disparities include:

- Hispanic persons at 2.3 times the risk of death
- Non-Hispanic Black persons at 1.9 times the risk of death
- American Indian or Alaska Native at 2.4 times the risk of death

Some reasons for these differences include:

- Systemic and structural racism
- More likely to live in crowded housing with close physical contact
- More likely to work in an environment in which social distancing is not possible
- Inadequate access to health care
- Multigenerational families
- Higher rates of underlying conditions²
- Other disparities and inequities

| COVID-19 Impact on Creek County (as of Feb. 25, 2022) |

Written Comments on Previous CHNA and Implementation Strategy

Ascension St. John Sapulpa’s previous CHNA and implementation strategy were made available to the public and open for public comment via our website (https://healthcare.ascension.org/chna). No comments from the community were received.

Data Limitations and Information Gaps

Although it is quite comprehensive, this assessment cannot measure all possible aspects of health and cannot represent every possible population within Creek County. This constraint limits the ability to fully assess all the community’s needs.

For this assessment, three types of limitations were identified:

- Some groups of individuals may not have been adequately represented through the community input process. Those groups, for example, may include individuals who are transient, who speak a language other than English, or who are members of the lesbian/gay/bisexual/transgender+ community.
- Secondary data is limited in a number of ways, including timeliness, reach, and descriptive ability with groups as identified above.
- An acute community concern may significantly impact a hospital’s ability to conduct portions of the CHNA. An acute community concern is defined by Ascension as an event or situation that may be severe and sudden in onset or newly affects a community. These events may impact the ability to collect community input, may not be captured in secondary data, and/or can present in the middle of the three-year CHNA cycle. For the 2021 CHNA, the following acute community concerns were identified:
  - The COVID-19 pandemic
  - Spike in inflation / economic instability
  - Widespread confusion about how to access newly expanded Medicaid in Oklahoma
  - Climate change
  - Increased racial tensions following high-profile incidents (e.g., the George Floyd murder)
  - Worsening political divisiveness that trickles down into everyday social interactions

Despite the data limitations, Ascension St. John Sapulpa is confident of the overarching themes and health needs represented through the assessment data. This is based on the fact that the data collection included multiple methods, both qualitative and quantitative, and engaged the hospital as well as participants from the community.
Community Needs

Ascension St. John Sapulpa, with contracted assistance from Seven Rivers Consulting LLC, analyzed secondary data of over a broad number of indicators and gathered community input through interviews with community residents, vulnerable population groups, key stakeholders, and civic leaders to identify the needs in Creek County. In collaboration with community partners, Ascension St. John Sapulpa used a phased prioritization approach to identify the needs. The first step was to determine the broader set of identified needs. Identified needs were then narrowed to a set of significant needs that were determined most crucial for community stakeholders to address.

Following the completion of the community health needs assessment (CHNA), Ascension St. John Sapulpa will select all or a subset of the significant needs as the hospital’s prioritized needs to develop a three-year implementation strategy. Although the hospital may address many needs, the prioritized needs will be at the center of a formal CHNA implementation strategy and corresponding tracking and reporting. The image above also describes the relationship between the needs categories.

Identified Needs

Ascension has defined “identified needs” as the health outcomes or related conditions (e.g., social determinants of health) impacting the health status of Creek County. The identified needs were categorized into groups such as health behaviors, social determinants of health, length of life, quality of life, clinical care, and systemic issues in order to better develop measures and evidence-based interventions that respond to the determined condition.

Significant Needs

In collaboration with community partners, Ascension St. John Sapulpa utilized the Catholic Health Association's “A Guide for Planning & Reporting Community Benefit” to develop a list of significant needs for Creek County. Ascension has defined “significant needs” as the identified needs that have been deemed most significant to address based on established criteria and/or prioritization methods.
Using Guideline 5 - Defining and Validating Priorities, we analyzed our data using recommended criteria and/or prioritization methods. The process occurred as follows:

- We combined and reviewed all of the data sets obtained from our research, including:
  - Focus group sessions
  - Vulnerable population group interviews
  - Key stakeholder interviews
  - Civic leader interviews
  - Secondary data

Our review revealed several key themes/problems (e.g., access to care, mental and behavioral health, etc.) that spanned across each of the data sets listed above. We further analyzed and prioritized each of the problems according to the following criteria:

- The relative number of people in the county impacted by the problem
- The importance of the problem to county residents and stakeholders
- Existing resources available in the county to address the problem
- The risk of disease/death associated with the problem
- The way the problem has improved or worsened in the county over the past several years
- The impact of the problem on vulnerable populations (e.g., Black or African American, LGBTQ+, etc.)

Through the prioritization process for the 2021 CHNA, we identified the following significant needs* for Creek County:

- Mental and behavioral health
- Access to care: barriers to primary care
- Diet and exercise: access to healthy food
- Alcohol and drug use: access to treatment and recovery services
- COVID-19
- Housing and transit: reliable transportation
- Education: health literacy

*Ascension's need terminology is based on the County Health Rankings Model. However, if applicable, a measure within that need is noted after the colon to further specify or clarify the need.

To view health care facilities and community resources available to address the significant needs, please see Appendix F.

A description (including data highlights, community challenges and perceptions, and local assets and resources) of each significant need are on the following pages.
Mental and Behavioral Health

Why Is It Important?

Without mental wellness, many people experience difficulty functioning their roles as students, parents, or employees, leading to a less productive community. Across the region, access to comprehensive mental health was limited.

Community Challenges & Perceptions

- The COVID-19 pandemic increased isolation, depression, and stress.
- Stigma remains problematic.
- Lack of affordable housing often produces mental distress.
- Poor mental health places additional burdens on society:
  - First responders
  - Schools
  - Health systems
  - Criminal justice

Local Assets & Resources

- Ascension St. John Senior Life Solutions
- CREOKS Health Services
- Human Skills and Resources, Inc.
- Muscogee (Creek) Nation Behavioral Health Services
- Parkside Psychiatric Hospital & Clinic
- Private providers

Individuals Who Are More Vulnerable

- People of color
  - Blacks and African Americans
  - Native Americans
  - Hispanics
- Elders
- LGBTQ+ individuals
- Individuals experiencing alcohol and/or drug use disorders
- Males (w/respect to suicide risk)

## Access to Care: Barriers to Primary Care

### Why Is It Important?

Primary care is an essential pillar for reducing health disparities and helping people to thrive in their communities. However, accessing primary care services can be quite challenging. Lack of health insurance, language barriers, the inability to take time off work to attend appointments, caregiving responsibilities, transportation-related barriers, and a shortage of providers all erode primary care’s ability to keep communities healthy.

### Community Challenges & Perceptions

- Accessing appointments outside of business hours is limited.
  - Inappropriate urgent care and emergency department use is in direct response to poor access to primary care.
- There are long waits for scheduling new appointments with primary care providers.
- There is a general lack of understanding the health system (low health literacy).
- The health care workforce is diminishing due to aging providers and clinician burnout.
- Lack of health insurance severely restricts primary care provider access and choice.

### Local Assets & Resources

- Ascension Medical Group St. John Primary Care Sapulpa
- Cura Medical Clinic
- Creek County Health Department
- Private providers
- Sapulpa Indian Health Center
- Tulsa Healthcare Coverage Project (health care insurance enrollment assistance; located in Tulsa, Okla.)
- Utica Park Clinic - Bristow

### Individuals Who Are More Vulnerable

- Low-wage employees, particularly those with more than one job
- Individuals who are uninsured or underinsured
- Non-English speakers
- Individuals lacking health literacy

### Data Highlights

![Ambulatory preventable hospital stays per 1,000](chart.png)
**Diet and Exercise: Access to Healthy Food**

**Why Is It Important?**

Without access to healthy food, people are at higher risk of diet-related illnesses, such as obesity, diabetes, and cardiovascular disease. Access to low-cost, nutritious food is limited. Many in our region live in “food deserts.” Those with limited income or who do not have a grocery store within close proximity often suffer from diet-related illnesses at the highest rates. While regular physical activity rates are low across the county, exercise was not identified as a priority need among participants.

**Community Challenges & Perceptions**

- Access to grocery stores containing fresh, nutritious food is limited.
- Fast food and convenience stores are ubiquitous across the county.
- Many people lack health literacy, not understanding the links between the food they consume and related health outcomes.
- Children and senior citizens are at highest risk for malnutrition and/or severe vitamin and mineral deficiencies.
- Even with good nutrition options, improving overall health is challenging because of a lack of transportation and physical activity barriers.

**Individuals Who Are More Vulnerable**

- Elders
- Infants and young children
- Individuals with disabilities
- Individuals whose income is near or below the federal poverty line
- Individuals without reliable transportation

**Local Assets & Resources**

- Bristow Social Services, Inc.

Alcohol and Drug Use: Access to Treatment and Recovery Services

**Why Is It Important?**
Abuse of alcohol and illicit drugs remains a leading reason for societal dysfunction, which can lead to breakdown of relationships, families, economic stability, and long-term illness, and even entanglements with the criminal justice system. Yet, many people abuse alcohol and illicit drugs to “escape” from a variety of everyday issues, including mental trauma, anguish, and/or boredom. Nearly everyone we interviewed agreed that recovery resources are limited across the region, particularly for those requiring long-term treatment and counseling.

**Community Challenges & Perceptions**
- When people are unable to meet their social, economic, and mental health needs, alcohol and drugs offer immediate relief.
  - Sometimes it’s easier to obtain illicit drugs than prescribed ones.
- Fentanyl and methamphetamine abuse rates are rising across northeastern Oklahoma.
- Accessing acute recovery intervention services (detox) is straightforward, but long-term treatment is under-resourced, understaffed, and generally inaccessible, even with insurance.

**Local Assets & Resources**
- CREOKS Health Services
- Faith-based organizations
- Human Skills & Resources
- Muscogee (Creek) Nation Behavioral Health Services
- Oklahoma State University Prevention Programs (Region 9 programs, Creek County Drug-Free Communities, and Creek County TSET Healthy Living Program)
- 12&12 Addiction Recovery Center (located in Tulsa, Okla.)
- Private facilities

**Individuals Who Are More Vulnerable**
- Individuals whose income is near or below the federal poverty line
- Individuals with pre-existing chronic physical disorders (e.g., chronic pain)
- Individuals with pre-existing mental health disorders
- Individuals who drink alcohol and use prescribed opioids
- Individuals who are uninsured or underinsured, and those who have trouble accessing primary care and/or mental health services
- Individuals who are unemployed or underemployed

**Data Highlights**

COVID-19

Why Is It Important?
The COVID-19 pandemic has led to unprecedented morbidity and mortality across the region. It has also created widespread social and economic dysfunction. Many people suddenly lost their employment and housing, while educational institutions were closed for months at a time – stymieing childhood intellectual and social development. The pandemic exposed lingering issues of inequality and racial discrimination, setting the stage for conflict between those favoring individual rights vs. protecting the public. Unfortunately, misinformation continues to thwart the ability to keep citizens healthy and thriving in their communities.

Community Challenges & Perceptions

- The pandemic promoted stress and isolation among all communities, regardless of wealth, education, or health status.
- Many medical and mental health conditions flared during the pandemic because of a lack of access to personnel, facilities, screening, and treatment.
- Domestic violence, crime, and drug abuse also rose during the pandemic.
- Some believe that fatigue, fear, and skepticism associated with the pandemic is contributing to widespread societal breakdown.

Individuals Who Are More Vulnerable

- Elders
- Individuals experiencing chronic medical conditions:
  - Diabetes
  - Cardiovascular disease
  - Cancer
  - Pulmonary conditions
- Individuals who are immunocompromised
- Individuals diagnosed with obesity
- Pregnant women
- Individuals whose income is near or below the federal poverty line

Local Assets & Resources

- Ascension St. John Sapulpa
- Creek County Health Department
- Oklahoma State Department of Health
- Local pharmacies
- Private providers

Housing and Transit: Reliable Transportation

Why Is It Important?

Like in most parts of the U.S., residents of northeastern Oklahoma struggle with transportation. While some of us take our cars for granted, automobiles are an out-of-reach, luxury item to many living in the community. With rising fuel, auto insurance, and maintenance costs, the average family pays $713 per month (or 56 cents per mile*) to own an automobile. Recently, used car prices have skyrocketed due to supply chain issues related to the pandemic. Rural communities (including most of Creek County) are particularly dependent on cars, given the long distances one must travel between home, work, school, shopping, health facilities, places of worship, and recreational activities.

Community Challenges & Perceptions

- The price of gasoline is rising fast. Many cannot afford to fill their gas tanks regularly, maintain their cars, or purchase auto insurance.
- Distances can be daunting, especially to elders.
- State-provided transportation resources (e.g., Sooner Ride, The Lift) are bureaucratic and limited.

Local Assets & Resources

- Cimarron Public Transit
- Creek County Ambulance Service

Unless individuals have reliable access to a working automobile themselves or through a family member or friend, transportation across rural parts of the county is difficult.

Individuals Who Are More Vulnerable

- Elders
- Children
- Individuals who are employed but whose income is near or below the federal poverty line
- Individuals with disabilities

# Health Literacy

## Why Is It Important?

Lack of health literacy emerged as one of the most common themes identified among focus group participants, key stakeholders, and civic leaders. Despite recent attempts to “improve the patient experience,” the entire health sector seems complex, poorly coordinated, and overwhelming to many seeking care. Furthermore, people reported difficulty with accessing safe housing, nutritious food, and reliable transportation. No clear reason emerged as a single cause, but bureaucratic processes, language barriers, and intimidation kept many from accessing health and social resources available in the community.

## Community Challenges & Perceptions

- Locating primary care providers is difficult, and the wait to be seen as a new patient can span many months.
- Locating mental health and drug abuse recovery care is even more challenging.
- Verbal and written instructions from health providers seemed to confuse a great number of individuals.
- Housing, health care, and food benefit agencies generally do not coordinate with one another, leading to further confusion and inconvenience.
- Many people we spoke with retain a strong sense of Individualism. That is, people often require basic services, but are too prideful to accept help from the community.

## Local Assets & Resources

- Community health worker programs and services
- Creek County Health Department
- Creek County Literacy
- Creek County Public Libraries (Bristow, Drumright, Kellyville, Mannford, Mounds, Oiltan and Sapulpa)
- Creek County TSET Healthy Living Program
- University of Oklahoma Health Literacy Library (located in Tulsa, Okla.)

## Data Highlights

There is no data to report for this significant need.

## Individuals Who Are More Vulnerable

- Individuals whose income is near or below the federal poverty line
- Elders
- Individuals whose first language is not English
- Individuals with only a high school education (or less)
- Individuals with mental and behavioral health conditions
Prioritized Needs

Following the completion of the assessment, Ascension St. John Sapulpa, in collaboration with Seven Rivers Consulting, has selected the prioritized needs outlined below for its 2021 CHNA implementation strategy. Ascension has defined “prioritized needs” as the significant needs that have been prioritized by the hospital to address through the three-year CHNA implementation strategy:

● Mental and behavioral health – This need was selected because across the region, access to comprehensive mental health services is limited. Chronic stress, the COVID-19 pandemic, poverty, and alcohol and drug use all worsened mental health across Creek County. Counseling services are difficult to access and are generally available only to individuals of higher socioeconomic status, given that most mental health care providers only accept cash (rather than insurance) payments for therapy services. While secondary data on adverse childhood experiences (ACEs) are not universally captured, the issue was referenced several times by community input participants, particularly as they affect the development of many mental health conditions. Ascension St. John recognizes that ACEs disproportionately affect the county and intends to continue its work to address them through implementation strategy efforts.

● Access to care: barriers to primary care – This need was selected because accessing primary care services can be quite challenging for some residents living in Creek County. Lack of health insurance, language barriers, inability to take time off work to attend appointments, caregiving responsibilities, transportation-related barriers, and a shortage of providers all impede primary care's mission to keep communities healthy. The COVID-19 pandemic has exacerbated many of these challenges, leading to fewer people being seen by their primary care providers.

● Diet and exercise*: access to healthy food – This need was selected because many residents of Creek County lack access to healthy foods, including fresh fruit and vegetables. Yet, there is plenty of inexpensive junk and fast food readily available, which raises the risk of diet-related illnesses, including diabetes, cardiovascular disease and stroke. Individuals whose income is near or below the federal poverty line and/or who live far away from grocery stores suffer the most from diet-related illnesses. While regular physical activity rates are low across the county, exercise was not identified as a priority focus among participants.

*Ascension's need terminology is based on the County Health Rankings Model, which is why "exercise" was included. However, access to healthy food was the need that rose to the top in significance. Accordingly, that need will be the focus of implementation strategy efforts.

Ascension St. John Sapulpa understands the importance of all the health needs of the community and is committed to playing an active role in improving the health of the people in the communities it serves. For the purposes of this CHNA, Ascension St. John Sapulpa has chosen to focus its efforts on the priorities listed above.
Alcohol and drug use, COVID-19, housing and transit, and education were not selected in this CHNA cycle. A thorough analysis of data was performed, and while many needs were deemed important, these did not rise to the same level of prioritization as the three needs listed above.

While all of these issues continue to plague residents living across the county, they did not match the numbers concerned about mental and behavioral health, access to care, and access to healthy food. Furthermore, people reported that drug abuse, the COVID-19 pandemic, transportation barriers and health literacy concerns were important, but less likely to impact daily life. Still, these issues deserve further attention and study by health systems, as they reflect important secondary factors adversely affecting health and prosperity in Creek County.
Summary of Impact from the Previous CHNA Implementation Strategy

An important piece of the three-year CHNA cycle is revisiting the progress made on priority needs set forth in the preceding CHNA. By reviewing the actions taken to address the significant needs and evaluating the impact those actions have made in the community, it is possible to better target resources and efforts during the next CHNA cycle.

Highlights from the Ascension St. John Sapulpa’s previous implementation strategy include:

- Removed barriers of access to health care within the service area by advocating Medicaid expansion in Oklahoma to increase coverage for community members living in poverty.
- Addressed racial inequities and disparities through new and existing community partnerships.
- Promoted access to health care for underserved populations through community-based Medical Mission at Home events and free drive-through and on-site vaccine clinics.
- Implemented an intensive outpatient geriatric psychiatric program for seniors ages 65 and older with behavioral health issues in Creek County.
- Explored various opportunities to develop initiatives to address food insecurity in the community, forging new partnerships and connections with areas of the hospital.
- Assessed opportunities for systematic screening and intervention for patients identified as tobacco users in ambulatory and inpatient settings to reduce the health impact of tobacco use in the community. Streamlined a tobacco cessation process that allows e-referrals from the electronic medical record to the Hospitals Helping Patients Quit program.
- Conducted education on adverse childhood experiences (ACEs) and human trafficking to more than 20 community agencies and organizations to increase awareness on the correlation between high ACE scores and human trafficking, as well as their impact on health outcomes.
- Expanded the Ascension St. John suspected child abuse and neglect (SCAN) committee to include community experts and liaisons.
- Geared grant funding programs to prioritize community programs and services that address one or more of the priority health needs identified through the CHNA.

A full evaluation of our efforts to address the priority health needs identified in the 2018 (fiscal year 2019) CHNA can be found in Appendix G.
Approval by Hospital Board of Directors

To ensure the Ascension St. John Sapulpa’s efforts meet the needs of the community and have a lasting and meaningful impact, the 2021 community health needs assessment (CHNA) was presented to the Ascension St. John Sapulpa board of directors for approval and adoption on April 21, 2022, as well as the Ascension St. John health system board of directors on April 27, 2022. Although an authorized body of the hospital must adopt the CHNA and implementation strategy reports to be compliant with the provisions in the Affordable Care Act, adoption of the CHNA also demonstrates that the board is aware of the findings from the CHNA, endorses the priorities identified, and supports the strategy that has been developed to address prioritized needs.
Conclusion

The purpose of the community health needs assessment (CHNA) process is to develop and document key information on the health and well-being of the community Ascension St. John Sapulpa serves. This report will be used by internal stakeholders, non-profit organizations, government agencies, and other community partners of Ascension St. John Sapulpa to guide the implementation strategies and community health improvement efforts as required by the Affordable Care Act. The 2021 CHNA will also be made available to the broader community as a useful resource for further health improvement efforts.

Ascension St. John Sapulpa hopes this report offers a meaningful and comprehensive understanding of the most significant needs for residents of Creek County. As a Catholic health ministry, Ascension St. John Sapulpa is dedicated to spiritually centered, holistic care that sustains and improves the health of not only individuals, but the community it serves. With special attention to those who are poor and vulnerable, we are advocates for a compassionate and just society through our actions and words. Ascension St. John Sapulpa is dedicated to serving patients with compassionate care and medical excellence, making a difference in every life we touch. The hospital values the community's voice and welcomes feedback on this report. Please visit our public website (https://healthcare.ascension.org/chna) to submit your comments.

Appendix D: Secondary Data and Sources
Appendix E: Significant Need Highlights
Appendix F: Health Care Facilities and Community Resources
Appendix G: Evaluation of Impact From Previous CHNA Implementation Strategy
Appendix H: Report Acknowledgements
Appendix A: Definitions and Terms

**Acute Community Concern**
An acute community concern is an event or situation that may be severe and sudden in onset, or newly affects a community. This could describe anything from a health crisis (e.g., COVID-19, water poisoning) to an environmental disaster (e.g., tornado, flood) or other event that suddenly impacts a community. The framework is a defined set of procedures to provide guidance on the impact (current or potential).
Source: Ascension Acute Community Concern Assessment Framework

**Collaborator**
A collaborator is a third-party, external community partner that is working with the hospital to complete the assessment. Collaborators might help shape the process, identify key informants, set the timeline, contribute funds, etc.

**Community Focus Groups**
A focus group is a group discussion with selected individuals. A skilled moderator is needed to lead focus group discussions. Members of a focus group can include internal staff, volunteers and the staff of human service and other community organizations, users of health services, and members of minority or disadvantaged populations.
Source: Catholic Health Association, Assessing and Addressing Community Health Needs, 2015 Edition II

**Community Served**
A hospital facility may take into account all the relevant facts and circumstances in defining the community it serves. This includes: the geographic area served by the hospital facility; target populations served, such as children, women, or the aged; and principal functions, such as a focus on a particular specialty area or targeted disease.

**Consultant**
A consultant is a third-party, external entity paid to complete specific deliverables on behalf of the hospital (or coalition/collaborators); it is alternatively referred to as a vendor.

**Demographics**
Demographics are the population characteristics of the community. Sources of information may include population size, age structure, racial and ethnic composition, population growth, and density.
Source: Catholic Health Association, Assessing and Addressing Community Health Needs, 2015 Edition II

**Identified Need**
An identified need is a health outcome or related condition (e.g., social determinant of health) impacting the health status of the community served.

**Key Stakeholder Interviews**
Key stakeholder interviews are a method of obtaining input from community leaders, organization/agency representatives, and public health experts one-on-one. Interviews can be conducted in person or over the telephone. In structured interviews, questions are prepared and standardized prior to the interview to ensure consistent information is solicited on specific topics. In less structured interviews, open-ended questions are
asked to elicit a full range of responses. Individuals with a special knowledge or expertise in public health may include representatives from a state or local health department, faculty from schools of public health, and providers with a background in public health. Key stakeholders may also be referred to as key informants. Source: Catholic Health Association, Assessing and Addressing Community Health Needs, 2015 Edition II

**Medically Underserved Populations**
Medically underserved populations include populations experiencing health disparities or that are at risk of not receiving adequate medical care because of being uninsured or underinsured, or due to geographic, language, financial, or other barriers. Populations with language barriers include those with limited English proficiency. Medically underserved populations also include those living within a hospital facility’s service area but not receiving adequate medical care from the facility because of cost, transportation difficulties, stigma, or other barriers.

Source: Internal Revenue Service

**Prioritized Need**
A prioritized need is one of the significant needs that has been selected by the hospital to address through the CHNA implementation strategy.

**Significant Need**
A significant need is an identified need that has been deemed important to address based on established criteria and/or prioritization methods.
Appendix B: Community Demographic Data and Sources

The tables below provide a description of the community's demographics. The description of the importance of the data is largely drawn from the County Health Rankings & Roadmaps website.

**Population**

Why it is important: The composition of a population, including related trends, is important for understanding the community context and informing community planning.

<table>
<thead>
<tr>
<th>Population</th>
<th>Creek County</th>
<th>Oklahoma</th>
<th>U.S.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total</td>
<td>71,522</td>
<td>3,956,971</td>
<td>331,839,745</td>
</tr>
<tr>
<td>Male</td>
<td>49.5%</td>
<td>49.5%</td>
<td>49.2%</td>
</tr>
<tr>

<td>50.5%</td>
<td>50.5%</td>
<td>50.8%</td>
</tr>
</tbody>
</table>

*Data sources: U.S. Census Bureau, 2020; County Health Rankings & Roadmaps, 2021*

**Population by Race or Ethnicity**

Why it is important: The race and ethnicity composition of a population is important in understanding the cultural context of a community. The information can also be used to better identify and understand health disparities.

<table>
<thead>
<tr>

</table>

*Data sources: U.S. Census Bureau, 2020; County Health Rankings & Roadmaps, 2021*
Population by Age

Why it is important: The age structure of a population is important in planning for the future of a community, particularly for schools, community centers, health care and child care. A population with more youths will have greater education needs and child care needs, while an older population may have greater health care needs.

<table>

<td>16.5%</td>
</tr>
</tbody>
</table>

_data sources: U.S. Census Bureau, 2020; County Health Rankings & Roadmaps, 2021_

Income

Why it is important: Median household income and the percentage of children living in poverty, which can compromise physical and mental health, are well-recognized indicators. People with higher incomes tend to live longer than people with lower incomes. In addition to affecting access to health insurance, income affects access to healthy choices, safe housing, safe neighborhoods and quality schools. Chronic stress related to not having enough money can have an impact on mental and physical health. ALICE, an acronym for Asset Limited, Income Constrained, Employed, are households that earn more than the U.S. poverty level, but less than the basic cost of living for the county. Combined, the number of impoverished and ALICE households equals the total population struggling to afford basic needs.

</tr>
</tbody>
</table>

_data sources: U.S. Census Bureau, 2020; County Health Rankings & Roadmaps, 2021; UnitedforAlice.org_
**Education**

Why is it important: There is a strong relationship between health, lifespan and education. In general, as income increases, so does lifespan. The relationship between more schooling, higher income, job opportunities (e.g., pay, safe work environment) and social support, help create opportunities for healthier choices.

<table>
<thead>

Appendix C: Community Input Data and Sources

Focus Groups
Thirteen anonymous individuals participated in five focus groups in Creek County.

Interviews with Vulnerable Population Groups, Key Stakeholders, and Civic Leaders

- Caring Community Friends: Camille Teale, NMD
- Catholic Charities of Eastern Oklahoma: Peter Chacon
- Child Abuse Network: Michael Baxter, MD
- Cimarron Public Transit System: Laura Corff
- City of Sapulpa Mayor's Office: Craig Henderson
- Creek County Ambulance: Larry Pickens
- Creek County Health Department: Wendy Frankenburger
- Creek County Literacy Program: Melissa Struttmann
- Domestic Violence Intervention Services: Tracy Lyall
- Hospice of Green Country: Carol Goldstein
- Muscogee (Creek) Nation: Schuyler Steelberg
- MyHealth Access Network: David Kendrick, MD, MPH
- Oklahoma State Department of Health: Kelli Rader
- Oklahoma State University Center for Health Sciences, Child and Adolescent Psychiatry: Sara Coffey, DO
- Sapulpa Boys & Girls Club: James Jones
- Sapulpa Public Library: Martha Stalker
- Sapulpa Public Schools: Heather Browne
- Terence Crutcher Foundation: Tiffany Crutcher, MD
- TSET Healthy Living Program: Lisa Prescott
- Tulsa 211: Ashlie Casey
- Tulsa Area United Way: Brent Sadler
- Youth Services of Creek County: Erin Brook
Appendix D: Secondary Data and Sources

The tables below are based on data vetted, compiled, and made available on the County Health Rankings & Roadmaps (CHRR) website (https://www.countyhealthrankings.org). The site is maintained by the University of Wisconsin Population Health Institute, School of Medicine and Public Health, with funding from the Robert Wood Johnson Foundation. CHRR obtains and cites data from other public sources that are reliable. CHRR also shares trending data on some indicators.

CHRR compiles new data every year and shares it with the public in March. The data below is from the 2021 publication. It is important to understand that reliable data is generally two to three years behind due to the importance of careful analysis. Note: Data in the charts do not reflect the effects that the COVID-19 pandemic has had on communities.

### How to Read These Charts

**Why they are important:** Explains why we monitor and track these measures in a community and how it relates to health. The descriptions of “why they are important” are largely drawn from the CHRR website as well.

**County vs. state:** Describes how the county’s most recent data for the health issue compares to state.

**Trending:** CHRR provides a calculation for some measures to explain whether a measure has worsened or improved since the 2018 (fiscal year 2019) CHNA was completed.

- Red: The measure is worsening in this county.
- Green: The measure is improving in this county.
- Empty: There is no data trend to share or the measure has remained the same.

**Top U.S. counties:** The best 10 percent of counties in the country. It is important not just to compare with Oklahoma overall but also to know how the best counties are doing and how our county compares.

**Description:** Explains what the indicator measures, how it is measured, and who is included in the measure.

**N/A:** Not available or not applicable. There might not be available data for the community on every measure. Some measures will not be comparable.
Health Outcomes

Why they are important: Health outcomes reflect how healthy a county is right now. They reflect the physical and mental well-being of residents within a community.

### Physical Environment

**Why it is important:** The physical environment is where people live, learn, work, and play. The physical environment impacts our air, water, housing and transportation to work or school. Poor physical environment can affect our ability and that of our families and neighbors to live long and healthy lives.

**Health Behaviors**

Why they are important: Health behaviors are actions individuals take that can affect their health. These actions can lead to positive health outcomes or they can increase someone’s risk of disease and premature death. It is important to understand that not all people have the same opportunities to engage in healthier behaviors.

*All U.S. counties (not just top U.S. counties)
Appendix E: Significant Need Highlights

The following list of significant needs is listed in order of most pressing concerns as identified through community input and secondary data methods:

1. Mental and behavioral health
2. Access to care: barriers to primary care
3. Diet and exercise: access to healthy food
4. Alcohol and drug use: access to treatment and recovery services
5. COVID-19
6. Housing and transit: reliable transportation
7. Education: health literacy
Mental and Behavioral Health

Health leaders and laypeople alike identified mental health as the No. 1 issue that requires wider access and greater support. Without mental wellness, many people are unable to succeed in their roles as students, parents, or employees, leading to a less productive community. Across the region, access to comprehensive mental health is limited. While many felt it is easy to access a provider for initial assessment, ongoing treatment is only available to wealthy individuals. Many mental health providers/therapists hesitantly accept insurance, despite the fact that high out-of-pocket costs are prohibitively expensive to most people living in the community. While secondary data on adverse childhood experiences (ACEs) are not universally captured, the issue was referenced several times by community input participants, particularly as they affect the development of many mental health conditions. Ascension St. John recognizes that ACEs disproportionately affect the county and intends to continue its work to address them through implementation strategy efforts.

Key themes that arose in our interviews include the following:

- The COVID-19 pandemic fragmented individuals and communities, leading to increased isolation, depression, and stress.
- Stigma around having a mental health condition remains problematic.
- The widespread availability of alcohol and now medical marijuana become easy, short-term “escapes” for those dealing with mental distress, but complicates matters in the long run.
- Lack of adequate, affordable housing often causes mental distress, and/or exacerbates behavioral disorders. Restoring housing often reduces stress.
- Poor mental health places additional and unnecessary burdens on many different sectors of society, including first responders, schools, health systems, and criminal justice.

What can health systems and policymakers do?

- Offer information and resources on not just where to find low-cost mental health services, but step-by-step recommendations on how to access them.
- Partner with schools to identify and intervene in children at risk for poor mental health.
- Integrate mental health services into everyday medical care clinics.
- Improve funding for state-funded community behavioral health centers.

Notable Quotes

“Too many people are unemployed or underemployment – the pandemic made this worse. Earning a living wage and having job-related benefits can help people suffering from many health issues, including mental health disorders.”

“Many mental health issues are out of the clinician’s hands because they are a result of inadequate social and community support. Health care delivery could be improved, but the real issue is lack of funded social services for children and families.”

Stories of Resilience

[Name omitted] was facing years in prison for substance abuse related issues. Her pathway to addiction included childhood abuse and neglect, sexual trauma, domestic violence, and mental health issues – which led to addiction and criminal activity and behavior. Intensive treatment that includes addiction recovery, mental health counseling, job training, and parenting/life skills is by far better than long-term incarceration. Today, [name omitted] and many others like her are sober, have good jobs, and are reconnected with their children, all because of alternatives to incarceration, like the Oklahoma Drug and Mental Health Court programs.
Access to Care: Barriers to Primary Care

Primary medical care is associated with preventive services such as vaccinations, cardiovascular risk reduction, and cancer screenings. But perhaps more importantly, primary care providers develop deep relationships with patients, providing therapeutic alliance and health education — which produces better outcomes. Therefore, primary care is an essential pillar for reducing health disparities and helping people to thrive in their communities. However, accessing primary care services can be quite challenging. Lack of health insurance, language barriers, inability to take time off work to attend appointments, caregiving responsibilities, transportation-related barriers, and a shortage of providers all erode primary care's mission to keep communities healthy. The COVID-19 pandemic exacerbated many of these challenges, leading to fewer people being seen by their primary care physicians. If we are to build a more equitable health system, we must improve primary care access and funding, while strengthening their relationships with non-profit organizations, government agencies, and health insurers.

Key themes that arose in our interviews include the following:

- Securing access to new primary care providers varies, but some report waiting up to 12 months to get an appointment.
- An aging workforce combined with widespread turnover significantly reduces access to primary care providers.
- Patients enrolled in medical homes report greater ease receiving preventive care, mental health, social work services and health education.
- People without health insurance are ostensibly cut off from regular primary care providers, missing opportunities to receive health education while building therapeutic relationships and trust.

What can health systems and policymakers do?

- Consider offering evening and weekend primary care clinics that provide sliding-scale fee schedules for low-income patients.
- Expand medical home models when possible.
- Leverage nurse practitioners, clinical educators, and social workers to provide comprehensive prevention, education, and wellness services.
- Increase the neighborhood presence of primary care clinics and medical homes, rather than consolidate health services at large medical campuses.

Stories of Resilience

“The real problem was my anxiety, but no one at my doctor’s office seemed to take it seriously. A case worker at the hospital suggested I change doctors, so I could receive care at a ‘medical home.’ I had no idea what that was, but boy did it make a difference! After seeing my new doctor, his assistant arranged for me to speak with a mental health therapist later that same day. My anxiety is still a problem, but finally someone is addressing it.”
Diet and Exercise: Access to Healthy Food

Without access to healthful foods, people are at higher risk of diet-related illnesses, such as obesity, diabetes, and cardiovascular disease. There are several reasons why Oklahoma ranks among the bottom for daily consumption of fresh fruit and vegetables, not the least of which is lack of access to nutritious but low-cost food. In fact, many northeastern Oklahomans live in so-called food deserts*, where there is limited or no access to healthy foods. Those with limited income or who live far away from grocery stores suffer from diet-related illnesses at the highest rates. Both experts and laypeople alike agreed that poor nutrition is a principal reason why our state endures such unhealthy outcomes. Better policies, education, and community partnerships — along with tax incentives to build full-service groceries — can help reverse these trends.

Key themes that arose in our interviews include the following:

- Many people lack health literacy, in which they fail to see clear links between the food they consume and chronic health outcomes.
- Fast food and convenience stores are ubiquitous, offering low-quality but cheap, pre-prepared food to busy people with low incomes.
- Access to grocery stores containing fresh, nutritious food is unreliable, as transportation is not always available in many communities.
- Children and senior citizens are at the highest risk for malnutrition and/or severe vitamin and mineral deficiencies.

What can health systems and policymakers do?

- Strengthen partnerships with non-profit organizations (e.g., food banks) to ensure patients can access highly nutritional foods.
- Facilitate low-cost or no-cost outpatient nutritional seminars and cooking classes, and even co-sponsor community gardening efforts.
- Train clinicians to focus on healthy eating habits, just as much as they emphasize medicines, tests, and procedures.

*The U.S. Department of Agriculture defines a food desert as an area that has a poverty rate ≥20% and at least 500 people (or 33% of the population) lives >1 mile from the nearest large grocery store (> 10 miles from the nearest large grocery store in rural areas.)

Notable Quotes

“There are many places to buy prepared meals in our community, but unfortunately, most of it is fast food or comfort food (e.g., chicken fried steak). The one healthy restaurant in town recently closed.”

“Eating is more than just meeting your daily nutritional requirements. Food is cultural – it is served at everyday occasions: from business meetings to celebrations to recreation. Portion sizes have increased over the years and many of us [over]eat to feed unmet emotional needs.”

Stories of Resilience

“I knew I was in trouble when I was no longer fitting into my usual clothes. My mom took me to shop at the Big & Tall store – but that didn’t stop my obsession with junk foods. When my doctor diagnosed me with diabetes, I cried so hard for weeks. Fortunately, I got hooked up with Sandra, a diabetes educator. She pushed me, but over the course of six months, I lost 15 pounds, and today I no longer take insulin. I still have a long way to go – but diabetes is something that no one should try to handle alone. I don’t know what I’d do without Sandra and my mom.”
Alcohol and Drug Use: Access to Treatment and Recovery Services

Enjoying alcoholic beverages is part of a cultural foundation to many societies around the world. Yet, too many people abuse alcohol and illicit substances to “escape” from a variety of issues, including mental trauma, anguish and/or boredom. Abuse of alcohol and/or drugs remains a leading reason for societal dysfunction, which can lead to breakdown of relationships, families, economic stability, long-term illness, and even entanglements with the criminal justice system. Many of the participants we interviewed agreed that alcohol and drug abuse undermines community stability, while pandemic-related isolation and stress seemed to accelerate patterns of addiction. While people were divided on best ways to combat the problem, nearly everyone agreed that alcohol and substance abuse recovery resources were limited across the region, particularly for those requiring long-term care and treatment.

Key themes that arose in our interviews include the following:

- Alcohol abuse has always been problematic in society, but the number of people abusing fentanyl and methamphetamine has recently accelerated across northeastern Oklahoma.
- When people cannot meet their social, economic, and mental health needs, alcohol and drugs offer immediate relief, and are sometimes the only therapeutic agents that are widely available.
- Many people can access acute recovery intervention (detox), but long-term treatment is under-resourced, understaffed, and often inaccessible.

What can health systems and policymakers do?

- Combine primary care and mental health and recovery services in more integrated ways. Address underlying reasons why people abuse drugs and alcohol in the first place.
- Improve insurance reimbursement for alcohol and substance recovery services.
- Educate the public on destigmatizing those seeking recovery for their addiction behaviors.
- Identify alternative pathways in the criminal justice system to lessen jail time for non-violent drug offenders.

Stories of Resilience

“I was so lucky to get into a methamphetamine rehab program. I hit bottom and cried a lot of tears in the process. But when I graduated [from the program] I was able to reconnect with my babies and earn a decent living; I’ve stayed clean and sober for eight months now. But I also recognize that I could easily be sitting in a jail cell right now – and how many people will never get the second chance that I received.”

Notable Quotes

“I can get a mammogram, a PAP smear, and my blood pressure monitored without too much difficulty. But no one will help me or my family with my alcohol struggles.”

“I went through rehab once. But a few months after I finished the program, I relapsed, and lost my job and my fiancée in the process. All my friends around me were doing drugs – and that’s when I fell back off the wagon. I hope to go through rehab again, but I’m not sure where to start, or if they’ll take me back.”
COVID-19

The COVID-19 pandemic has not only led to unprecedented deaths across the region, but it has also created widespread social and economic dysfunction. With contagion rapidly spreading in early 2020, large numbers of health care and community resource agencies quickly shut down and stayed closed for months. As a result, many people were unable to access vital care and resources; job losses numbered in the thousands. Educational institutions were closed for months at a time, keeping kids at home, styming their intellectual and social development. Meanwhile, misinformation clogged social media channels, leading to increased political tensions and widespread distrust within communities. Many public health officials agree that the pandemic exposed lingering issues of inequality and racial discrimination, setting the stage for conflict between those favoring individual rights vs. protecting the public.

Key themes that arose in our interviews include the following:

- The pandemic created unprecedented stress and isolation among all communities, regardless of wealth, education, or health status.
- Many medical and mental health conditions flared during the pandemic because of a lack of access to personnel, facilities, screenings, and treatment.
- Domestic violence, crime, and substance abuse also increased during the pandemic.
- Some believe that fatigue, fear, and skepticism associated with the pandemic is contributing to widespread societal breakdown.

What can health systems and policymakers do?

- Community managers, politicians, businesses, religious entities, and neighborhood leaders must agree on clear messaging to the public, from disease mitigation policies to help with accessing vaccines.
- Educate the public on the best ways to reduce the spread of COVID-19 infection, while seeking non-inflammatory ways to build trust with the community.
- Identify clinical personnel at risk for burnout and intervene accordingly.
- Allow for greater flexibility in appointments, including telehealth visits.

Stories of Resilience

“I lost two grandparents and a dear family friend to COVID. They were all unvaccinated and didn’t seem to heed messages coming from public health leaders. We talked openly at church about the people we’d lost and invited our fellow congregants from the health community to speak about dangers stemming from the pandemic. We organized a vaccine drive in the church parking lot. People came from the congregation and beyond. If there’s one thing COVID taught me is that we have to all hang together through this. This is not a time to turn on your brother or sister.”

Notable Quotes

“Covid is arresting the development of not just schoolchildren but also adults. Time will tell what long-term effects emerge from the pandemic.”

“While everyone was touched by the pandemic, those with behavioral health conditions, people of color, and those living in poverty were disproportionately affected by the breakdown in health care and community-based resources.”

“The pandemic strengthened an ‘us-against-them’ mentality. I wish it would stop – there are no winners here.”
Housing and Transit: Reliable Transportation

Like in most parts of the country, northeastern Oklahomans struggle with transportation. Many communities were designed and planned with the automobile in mind, shunning the development of public transit infrastructure. While some of us take our cars for granted, they are an out-of-reach, luxury item to many living in our communities. With rising fuel, insurance, and maintenance costs, the average family pays $713 per month (or 56 cents per mile*) to own an automobile. Recently, used car prices have skyrocketed due to supply chain issues related to the pandemic. Even with a single functioning car, many nuclear families confront multiple demands every day, necessitating two or more automobiles — which can break household budgets. Rural communities are particularly dependent on cars, given the long distances one must travel between home, work, school, shopping, health facilities, places of worship, and recreational activities.

*American Automobile Association (AAA) estimates, 2018

Key themes that arose in our interviews include the following:

- The price of gasoline is rising fast. Many cannot afford $30-50 to fill their gas tanks.
- The state provides limited transportation resources (e.g., Sooner Ride, The Lift). However, reliability is problematic, and pre-arranged reservations are required, which is a barrier to some people.
- Universally, people enjoy the convenience of telehealth. But medical practices have varying policies around telehealth, which is confusing to patients. Lack of broadband also hinders telehealth access.

What can health systems and policy makers do?

- Strengthen partnerships with non-profit organizations to assist patients with ridesharing and state-funded transportation resources. This can help improve people's access to clinical visits and appointments.
- Instead of opening additional buildings on flagship campuses, health systems can leverage smaller neighborhood medical and mental health clinics to reduce transportation burdens.
- Increase telehealth visits, with concomitant expansion of broadband services in rural communities.
- Leverage mobile health units to serve far-flung rural communities with known transportation burdens.

Notable Quotes

“The social worker told me, ‘You don’t need to worry about securing rides to see your doctor; Uber and Lyft are available everywhere.’ ‘Yes,’ I countered. ‘But those companies require a credit card. No one I know (including me) has a credit card. Some of us don’t even have smartphones.’”

“There are two primary care clinics in my hometown, but I have to travel to Tulsa to see specialists or undergo testing, procedures, and receive advanced treatments. Yes, I have a car, but as an older person, I really don’t feel comfortable driving more than 10 minutes away from my home.”

Stories of Resilience

“For as long as I can remember, Doug owned the local mechanic shop. If your car is broken, Doug will fix it. I told Doug, ‘I have no money to pay for a new transmission.’ He told me not to worry about the cost; ‘Pay what you can, and I’ll repair your car eventually.’ That’s why I like living in a small town — we all pull for each other, especially when we’re in need.”
Education: Health Literacy

A top issue among many participants, lack of health literacy emerged as one of the dominant themes that stymies access to health and wellness services across the region. From enrolling in SoonerCare, to securing primary care appointments, to following medical instructions, the whole health care system seems complex, poorly coordinated, and overwhelming to many in the community. Furthermore, participants knew that housing, nutrition, and transportation resources were available throughout the community. However, many did not know how to access such resources or weren’t sure if they qualified for assistance. They were also intimidated by meeting with resource counselors, governmental agencies, or other community-based organizations.

Key themes that arose in our interviews include the following:

- It’s difficult to access primary care services. Many people don’t know how to locate a provider, and the wait to be seen as a new patient can span many months.
- Locating mental health and substance abuse recovery providers is especially challenging due to a lack of clinicians that accept insurance.
- While many people value their relationships with clinicians, they have trouble following verbal and written instructions on everything from securing medications to following up with a specialty provider.
- Individualism reigns across the region. Some admitted to knowing how to access resources but were too prideful to accept help from anyone else.
- The COVID-19 pandemic closed many non-profit and governmental agencies. Services were often still available, but only via phone or internet, which seemed daunting to many.

What can health systems and policymakers do?

- Offer clear post-visit clinical instructions in simple, easy-to-read formats.
- Ensure that health care staff are trained to work with people from a variety of backgrounds and cultures.
- Build stronger partnerships with community-based organizations to ensure coordination of care and ease of access to resources.
- Leverage care navigators and community health workers to help people access services that can benefit their health and wellness.

Stories of Resilience

It took a lot of support from friends and family members, but [name omitted] was eventually able to connect with staff at the Oklahoma Department of Human Services. After they helped her locate formula for her baby and rides to the pediatrician's office, [name omitted] wondered why she felt so intimidated to reach out to DHS in the first place.
Appendix F: Health Care Facilities and Community Resources

As part of the CHNA process, Ascension St. John Sapulpa has cataloged resources available in Creek County and the region that address the significant needs identified in this CHNA. Resources may include acute care facilities (hospitals), primary and specialty care clinics and practices, mental health providers, and other non-profit services. State and national resources can also provide information regarding programs that can better serve the needs of a person experiencing a specific problem.

The resources listed under each significant need heading is not intended to be exhaustive.

Appendix G: Evaluation of Impact from the Previous CHNA Implementation Strategy

Ascension St. John Sapulpa's previous CHNA implementation strategy was completed in November 2019, and addressed the following priority health needs: access to care, behavioral health, healthy lifestyles, and adverse childhood experiences (ACEs).

The table below describes the actions taken during the fiscal years 2020-2022 (tax years 2019-2021) to address each priority need and indicators of improvement.

Note: At the time of the report publication (June 2022), the third year of the cycle will not be fully complete. Individual hospitals will accommodate for that variable.

<table>
<thead>
<tr>
<th>PRIORITY NEED</th>

</thead>
<tbody>
<tr>
<td>Access to care</td>
<td>Medicaid expansion: Participated as a collaborating partner with the Yes on 802 campaign to put a question on the 2020 ballot to expand Medicaid coverage to eligible residents with an income of up to 133 percent of the FPL.</td>
<td>Complete</td>
<td>● Helped attain 178,000 signatures to put a question on the 2020 ballot to expand Medicaid coverage to eligible residents.</td>
</tr>
<tr>
<td></td>
<td>Medicaid expansion: Advocated for voters in the state of Oklahoma to adopt a ballot initiative to expand Medicaid coverage to eligible residents with an income of up to 133 percent of the FPL.</td>
<td>Complete</td>
<td>● A ballot initiative to expand Medicaid coverage was successfully adopted.</td>
</tr>
<tr>
<td></td>
<td>Medicaid expansion: Provided support to the health care community to prepare for Medicaid expansion.</td>
<td>Complete</td>
<td>● Supported increased staffing of temporary workforce to assist with the surge in need for Medicaid enrollment assistance.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>● Increased physician coverage as needed in response to Medicaid expansion in an effort to assist patients with enrollment and access.</td>
</tr>
<tr>
<td>Racial equity: Worked with the community to address racial inequities and disparities.</td>
<td>Ongoing</td>
<td>● Helped to address racial inequities and disparities through new and existing community partnerships.</td>
<td></td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
<td></td>
</tr>
<tr>
<td><strong>Social determinants of health (SDoH) screening:</strong> Participated in the Accountable Health Communities (AHC) program in partnership with MyHealth Access Network, the Tulsa Health Department and more than 4,800 community service providers to screen patients for needs pertaining to SDoH and provide navigation services to address needs.</td>
<td>Ongoing</td>
<td>● From the Accountable Health Communities program launch in August 2019 to the end of the calendar year 2021, 724,715 texts were sent to Ascension St. John patients, with a delivery rate of 86 percent (621,899 texts). There were more than 102,816 responses identifying 30,473 social needs. Ascension St. John's response rate was 25.5 percent compared with a state average of 20 percent, and the need rate was 19.2 percent, which is almost in line with the 20.1 percent for the state. Facilities and providers have had staggered implementation dates, but all emergency departments are participating in addition to all primary care and urgent care clinics. Food insecurity has been identified as the greatest need. Living need remains the second highest need present.</td>
<td></td>
</tr>
<tr>
<td><strong>Reduction in regional inequities and disparities in access to care:</strong> Targeted specific ZIP codes in the communities we serve identified as experiencing health disparities and poor health outcomes for possible development of telemedicine services.</td>
<td>Ongoing / plan development delayed due to COVID-19 pandemic</td>
<td>● A number of meetings were held to explore opportunities for school-based telehealth programs.</td>
<td></td>
</tr>
<tr>
<td><strong>Reduction in regional inequities and disparities in access to care:</strong> Promoted awareness of, and access to, health care for underserved populations.</td>
<td>Complete</td>
<td>● Promoted awareness of, and access to, health care for underserved populations through community-based Medical Mission at Home events and free, drive-through and on-site vaccine clinics.</td>
<td></td>
</tr>
<tr>
<td>Community support: Geared grant funding programs to prioritize community programs and services that promote access to care.</td>
<td>Complete</td>
<td>• Provided small grant funding across the market for around 50 community programs and services that promote access to care.</td>
<td></td>

|               | Service for victims of human trafficking: Advanced the Ascension St. John Human Trafficking Education & Response Program to identify and respond to victims of human trafficking. | Complete | • Since the program inception in August 2018 (through March 2022), the program has offered assistance to a total of 171 suspected victims of human trafficking.  
• Offered human trafficking education to 5,500 associates and community partners thus far.  
• About 3,070 associates took the education program evaluation survey. Results were statistically significant and indicated that 73 percent of associates felt confident or very confident in identifying a potential victim of HT after receiving HT education (only 37.6 percent felt confident or very confident in identification prior to HT education).  
• Received a federal grant totaling $350,000 over three years. This grant is awarded by the Office for Victims of Crime of the U.S. Department of Justice's Office of Justice Programs. Ascension St. John is the only recipient of this award in Oklahoma.  
• Completed dissemination of assessment pocket tools to key entry points at Ascension St. John hospitals and clinics.  
• Developed more than three additional community partnerships to strengthen community awareness and collaboration to combat human trafficking. |
| **Response to suspected child abuse and neglect:** Explored opportunities to enhance the Ascension St. John suspected child abuse and neglect (SCAN) committee and response. | Complete / ongoing | • Expanded the Ascension St. John suspected child abuse and neglect (SCAN) committee to include community experts and liaisons.  
• Work to define a reporting structure of the quality metrics related to SCAN has been delayed due to COVID-19 surges and reduced associate capacity with hope to continue in the near future. |
| --- | --- | --- |
| **Community engagement:** Explored opportunities for community partnership and collaboration to address ACEs in the communities served by Ascension St. John. | Complete / ongoing | • Met with Asemio to learn more about a local ACEs surveillance system and opportunities for partnership.  
• Continued exploration of this opportunity and other partnerships has been delayed due to COVID-19 surges and reduced associate capacity with hope to continue in the near future. |
| **Maternal/child health services and partnerships:** Explored opportunities for advancing services and partnerships targeting care of pregnant women and children birth to 3 years of age throughout Ascension St. John. | Delayed due to COVID-19 surges / ongoing | • A number of preliminary meetings were held to explore opportunities to enhance maternal/child health services and community partnerships. This work has been delayed due to COVID-19 surges, but is expected to continue. |
| **Associate support:** Initiated participation in the Ascension THRIVE program designed to develop solutions to address general benefit needs, social determinants of health, and economic issues experienced by economically vulnerable associates, some of whom experience or are at risk of adverse outcomes as a result of ACEs. | Delayed due to COVID-19 surges | • Initiated listening sessions to and preliminary participation in the program. This work is delayed/on pause due to COVID-19 surges. |
| **Community support:** Geared grant funding programs to prioritize community programs and services that address ACEs. | Complete | • Provided small grant funding across the market for more than 15 community programs and services that promote ACEs. |
Appendix H: Report Acknowledgements

In addition to the report authors and consultants noted in the Executive Statement, we would like to acknowledge the following individuals who contributed to the research and development of this report:

**Tulsa Health Department**
- Bruce Dart, PhD, Executive Director
- Jenna Grant, Resource Development Manager
- Christina Seymour, Project Manager
- Leanne Stephens, Marketing and Communications Director

**The University of Tulsa** (undergraduate student researchers)
- Natasha Chaalan
- Ann Marie Flusche
- Madison Hemenway
- Kristin Huang
- Lindsey Lange
- Jason Lu
- Kennedy Paredes
- Cassie Vestal
- Caiton Wilmoth

**Additional support**
- Glenda Armstrong, RN, University of Oklahoma
- Laudan Aron, MA, Urban Institute
- Jason Beaman, DO, Oklahoma State University
- Mary Bogle, MA, Urban Institute
- Mike Brose, MSW, Mental Health Association Oklahoma
- Gerard Clancy, MD, University of Tulsa
